SUMMARY

Fullstack developer with experience building end-to-end web and mobile applications with TypeScript, React, Next.js, React Native and Python (FastAPI). Specialized in scalable APIs built on clean architecture, Domain-Driven Design (DDD) and event-driven communication.

Experience with complex business systems —logistics platforms, invoicing and multi-app solutions—, delivering complete features from functional requirements to deployment, under Scrum and with unit and E2E testing.

EXPERIENCE

Digitan Agency — Fullstack software engineer

July 2025 – August 2026 · Córdoba, Argentina (remote)

- Built end-to-end web and mobile applications —frontend, backend and deployment— with Next.js, React Native and FastAPI.
- Designed and implemented scalable Python APIs (FastAPI) applying clean architecture, Domain-Driven Design (DDD) and event-driven communication.
- Contributed to complex business systems: logistics platforms, invoicing and multi-app solutions integrating web and mobile.
- Delivered complete features from functional requirements: data modeling, business logic, UI implementation from Figma and unit tests for use cases.
- Worked in agile teams under Scrum with Jira and Git; maintained existing projects through bug fixing, refactoring and performance improvements.
- Deployed and managed cloud environments (develop, staging and production), and independently delivered a complete project, from design to final handoff.

PROJECTS

Frida: clinical and administrative management for elderly care facilities

Technologies: Next.js | React | Python with FastAPI | PostgreSQL | pyventus | Playwright

Role: Fullstack Developer | Intern — Digitan Agency project, built solo

Web application that runs the clinical and administrative operation of an elderly care facility: patient history, vital signs, medication doses, staff traceability through action codes on shared devices, rooms and beds, shifts and invoicing. 12 bounded contexts in a three-layer DDD architecture with an event bus on pyventus, covered by 356 unit and integration tests (pytest) and 38 E2E tests (Playwright).

Atlas Protocol

Technologies: Next.js | Supabase | Vercel AI SDK | FastAPI | WebSocket

Role: Fullstack Developer | Product Manager | Team lead

AI-powered web application for creating personalized technical courses: it defines what to study to master a technology, generates content per module and answers questions through a chatbot grounded in the course. The backend consumes an LLM via API with streaming over WebSocket. MVP in closed testing.

UGMA Repository

Technologies: PHP | JavaScript | SQL | NoSQL | HTML | CSS

Role: Backend Developer | Product Owner | Team lead

The university's thesis repository: search by field, author, year and keywords, an approval workflow with distinct states and an admin panel for school coordinators. Deployed internally at the university.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, PHP

Frontend & Mobile: React, Next.js, Astro, Vite, React Native

Backend & APIs: FastAPI, Node.js, Payload CMS, REST APIs, WebSocket

Databases: PostgreSQL, MySQL, MongoDB, Supabase

Architecture & Patterns: Domain-Driven Design (DDD), clean architecture, event-driven architecture, OOP

Development Practices: Unit (pytest) and E2E (Playwright) testing, Git Flow, code review, refactoring

Tools & Methodologies: Git, GitHub, Jira, Scrum, Figma

AI: Effective prompting with LLMs (Claude Code, Cursor), building skills, hooks and agents. LLM integration in products: API consumption, streaming and system prompts.

Other: Cloud environment deployment and management (develop, staging, production), business-oriented product development

EDUCATION

Universidad Nororiental Privada Gran Mariscal de Ayacucho (UGMA)

Computer Engineering (2022 - 2026)
